

ORANGEHRM

LOGIN MODULE

TEST SUMMARY REPORT

Software Quality Assurance (SQA)

Prepared By

Muhammad Huzaifa Waheed

Project Date

23-May-2026

Application Under Test

OrangeHRM Demo

Project Type

Manual Testing Project

EXECUTIVE SUMMARY

This project was conducted to perform manual testing of the OrangeHRM Login Module. The testing activities focused on validating authentication functionality, input validation, password masking behavior, navigation functionality, and error message handling.

A structured testing approach was followed, including requirements analysis, test scenario creation, test case design, test execution, evidence collection, defect tracking, requirements traceability, and test reporting.

The project successfully demonstrated industry-standard software testing practices and resulted in the creation of comprehensive QA documentation, including test scenarios, test cases, RTM, defect tracking records, and test summary reporting.

PROJECT OVERVIEW

Item	Details
Application Name	OrangeHRM Demo
Module Tested	Login Module
Testing Type	Manual Testing
Tester	Muhammad Huzaifa Waheed
Browser	Google Chrome
Operating System	Windows 10

OrangeHRM is a web-based Human Resource Management System. The Login Module serves as the entry point for users and is responsible for authentication and access control.

This project focused on validating the functionality and usability of the Login Module under both positive and negative test conditions.

TESTING SCOPE

In Scope

Functional Testing

- Valid Login Verification
- Invalid Username Validation
- Invalid Password Validation
- Required Field Validation

UI Testing

- Login Page Layout Verification
- Error Message Verification

Security Related Validation

- Password Masking Verification

Navigation Testing

- Forgot Password Functionality

Out of Scope

The following modules were not included in this testing cycle:

- Dashboard Module
- Employee Management Module
- Recruitment Module
- Leave Management Module
- Admin Module

TEST ENVIRONMENT

Component	Details
Application	OrangeHRM Demo
Browser	Google Chrome
Operating System	Windows 10
Internet Connection	Stable Broadband

Testing Type	Manual Testing
--------------	----------------

Testing was conducted using Google Chrome on a Windows 10 operating system. All test cases were executed manually in a controlled environment.

TEST ARTIFACTS CREATED

The following QA artifacts were created during the execution of the OrangeHRM Login Module Manual Testing Project. These documents ensured complete test coverage, traceability, execution tracking, and reporting.

Artifact	Description	Status
Project Requirements Document	Defined project scope and testing objectives	Completed
Test Scenarios	High-level testing scenarios	Completed
Test Cases	Detailed test cases with expected results	Completed
RTM	Requirement traceability mapping	Completed
Bug Report	Defect tracking document	Completed
Test Summary Report	Final testing report	Completed
Screenshots	Test execution evidence	Completed

TEST EXECUTION SUMMARY

The execution phase involved running all planned test cases against the OrangeHRM Login Module. The objective was to verify expected behavior under both positive and negative testing conditions.

Metric	Count
Total Test Scenarios	10
Total Test Cases	10
Executed Test Cases	10
Passed Test Cases	10
Failed Test Cases	0
Blocked Test Cases	0
Not Executed Test Cases	0

Pass Percentage	100%
-----------------	------

All planned test cases were executed successfully. No unexpected behavior was observed during testing.

DEFECT SUMMARY

Defect analysis was performed throughout the testing cycle to identify any issues affecting functionality, usability, validation mechanisms, or navigation behavior.

Severity Level	Count
Critical	0
High	0
Medium	0
Low	0
Total Defects	0

Observation

No defects were identified during the execution of the planned test cases. All tested functionalities behaved according to the expected requirements and acceptance criteria.

Risk Assessment

No critical or high-risk issues were observed during testing. The Login Module demonstrated stable and consistent behavior throughout the execution cycle.

SCREENSHOT EVIDENCE

Screenshot ID	Description
SC-01	Login Page
SC-02	Successful Login Dashboard
SC-03	Invalid Credentials Error

SC-04	Required Username Validation
SC-05	Required Password Validation
SC-06	Both Fields Required Validation
SC-07	Password Masking Verification
SC-08	Forgot Password Page

CONCLUSION

A total of 10 test cases were designed and executed for the OrangeHRM Login Module.

The testing activities successfully validated authentication functionality, input validation, password masking behavior, navigation functionality, and error message handling.

All test cases passed successfully, resulting in a pass rate of 100%.

Based on the executed test cases and observed results, the Login Module is considered stable and functioning correctly under the tested conditions.

SKILLS DEMONSTRATED

- Manual Testing
- Functional Testing
- Negative Testing
- Validation Testing
- Test Case Design
- Test Execution
- Defect Reporting
- Requirements Traceability Matrix (RTM)
- Test Documentation
